

non-motor symptoms

in parkinson's survey

Looking for research participants

We're conducting a research study into the frequency, severity and burden of non-motor symptoms in Australians with Parkinson's disease.

We believe this is an important, understudied area of research and we would like to hear the perspectives of people living with Parkinson's.

This study will involve responding to an anonymous online survey that takes approximately 30 to 45 minutes to complete.

Your participation in this study would be greatly appreciated!

Take the survey:
