Information sheet for people with disability: COVID-19 oral medicines

15 July 2022

There are two oral COVID-19 antiviral medicines approved for use in Australia. They are called Paxlovid and Lagevrio. You can be treated with one of the medicines if you are over 18 years old with a COVID-19 infection and are at higher risk of becoming very sick.

It is important that you plan ahead:

- Speak with your doctor to discuss if the COVID-19 medicines will be right for you if you get COVID-19.
- Plan what you will do if you get COVID-19.
 - If you get COVID-19, you will need to ask your doctor for a script and to find out where you get the medicines from, for example: your local pharmacy or hospital.
 - If you have already talked to your doctor, and the doctor said the COVID-19 medicine will be right for you, you may be able to get the medicine more quickly.
 - These medicines need to be taken within 5 days of symptoms starting or a positive COVID-19 test even if you have no symptoms.

The advantages of these medicines are:

- They can be taken as tablets or capsules.
- You can take these medicines at home.
- You will not need to go to hospital or stay in hospital (unless you get very sick) while you have COVID.

The new medicines will help some people, but they are not suitable for everyone. Your doctor can help you work out what is right for you.

The chart on page 3 explains a bit more about who can get the COVID-19 medicines on the Pharmaceutical Benefits Scheme.

If you are at high risk of becoming very sick, get tested quickly if you get symptoms.

An online symptom checker is available here: www.healthdirect.gov.au/symptom-checker/tool, to help identify if you may have COVID, and what type of support you may need for your symptoms.

State and territory pathways for COVID-19 oral medicines

You can call the National Coronavirus Helpline and they can help you understand if you're eligible for COVID-19 medicines. In some states, they can help you to make an appointment with a GP. You can ask the person if they can help you with this when you call.

This service can be accessed by selecting Option 1 on the National Coronavirus Helpline on 1800 020 080.

If you call this Helpline, you should have details of your preferred GP practice ready to give them.

If Healthdirect can't reach your preferred practice they will put you in touch with a General Practice Respiratory Clinic (GPRC). GPRCs provide people with access to testing and treatment for respiratory systems.

More details about the Healthdirect pathways are here: <u>Supporting access to antiviral</u> treatment.

For people with swallowing difficulties

If you have difficulty swallowing tablets, you should speak to your doctor about what treatment is right for you.

The <u>NPS MedicineWise</u> and the Society of Hospital Pharmacists of Australia's <u>Don't Rush to Crush</u> have published information on the suitability of Lagevrio for people with swallowing difficulties and enteral feeding tubes.

You should also discuss this with your pharmacist when collecting your prescription.

Vaccination - stay up to date

Vaccination is still very important. Australia's COVID-19 vaccines are safe, and they work well to reduce your chance of getting very sick from COVID-19.

The best way to protect yourself from getting very sick from COVID-19 is to make sure you are up to date with your COVID-19 vaccinations and boosters.

If you are not sure how many doses you should have, or if you think you missed a vaccine dose, ask your doctor.

Your doctor can help you get any vaccinations you may have missed.

More information about COVID-19 vaccination is available here: https://www.health.gov.au/initiatives-and-programs/covid-19-vaccines/disability-sector/people-with-disability.

COVID-19 oral medicines: Things to consider

How to access COVID-19 medication

Before you get COVID-19

Make a plan for what you will do if you or someone who supports you gets COVID-19.

The following resources can help you to plan:

- Person-centred Emergency Preparedness COVID-19 Guide
- Department of Health COVID-19 treatments and winter preparedness webinar

Speak to your GP to see if COVID-19 treatments are suitable for you.

Steps to access COVID-19 medication

- If you have a positive RAT result, you should register this with your local state or territory
- If you have a positive PCR result, you do not need to register this with your local state or territory as they will receive the information automatically

Notify your support worker and/or family that you have tested positive for COVID-19. This will allow them to safely support you during this time

Contact your GP or available healthcare provider

- Remember to tell GP reception you have COVD-19 as they may schedule a telehealth appointment
- You may be eligible for COVID-19 treatments taken as a tablet of capsule. Your GP will be able to provide a prescription if you are eligible.
- If you are able to receive treatment for COVID-19, it is important you start taking the medication as soon as possible, and within five days of symptoms starting.

You should also ask your GP about any other support available to you.

The NPS MedicineWise and the Society of Hospital Pharmacists of Australia's Don't Rush to Crush have published information on the suitability of Lagevrio for people with swallowing difficulties and enteral feeding tubes.

If you are ineligible for treatment, call the National Coronavirus Helpline on 1800 020 080 (option 5) to access disability-specific support.

If you are eligible for a COVID-19 treatment and receive a prescription:

- Ask a support worker or trusted person to collect the medicine for you, or
- Ask the pharmacy what options are available for delivery.

Remember: when you have COVID-19 you should isolate where possible.

Call the National Coronavirus Helpline on 1800 020 080 (option 5) to access disability-specific support.
